ROBOTIC MASSAGE CHAIR

## RMS-15

Extra-thick pillow for added comfort

Our luxurious Get-a-Way® line was specifically designed for those who want the world's finest massage chair. The RMS-15 Get-a-Way® massage chair is the ultimate in indulgence and luxury, bringing the world's most advanced Robotic Massage® technology together with elegant design, sophisticated engineering and the finest materials to provide all the therapeutic benefits of a full body massage in an exquisite leather recliner.

From head to toe, every movement can be pre-programmed to personal preferences. With a touch of the remote control, the Get-a-Way® adjusts to the natural contour of the spine and moves three dimensionally at varying strengths, emulating the firm hands of a skilled masseuse.

Human Touch Technology® Robotic Massage® so closely replicates the therapeutic techniques used by back and spinal care professionals that it is certified as the preferred technology of the American College of Chiropractic Orthopedists.

As the world's leading manufacturer of sophisticated Robotic Massage® systems, all Interactive Health® chairs offer unparalleled excellence in stylish and functional massage chairs and recliners.

Get the best of both worlds, flawless, exquisite design, sumptuous leather with a choice of colors, and a Robotic Massage® so good, it feels real.

### Rotating multi-speed foot and calf massager

Provides a powerful three-dimensional massage for your calves and feet and doubles as a comfortable foot rest when rotated.

The RMS-15 Get-A-Way®, an amazingly luxurious aniline leather massage chair, is the first massage chair to ever feature an air control system, which allows you to totally customize your individual comfort level using an inflatable built-in membrane.

Release Lever

## the human touch™

Our patented Human Touch Technology® works like the wrists, arms and hands of a professional masseuse to yield a Robotic Massage® that feels remarkably human. There is nothing like it in the world.

## exceptional features

### ● AMC<sup>2</sup> Adaptive Massage Comfort Control

The AMC<sup>2</sup> feature gives you the ability to adjust the distance between you and the massage rollers by inflating or deflating air cylinders embedded in the backrest. Pump the cylinders up for a soft massage or deflate the cylinders completely for the most aggressive massage. The fully contained air supply system is one of the most quiet in the industry.

### ● Advanced Robotic Massage® Mechanism

The RMS-15 incorporates the latest massage functionality available in our line of chairs. The three-motor, four-roller robot has five massage modes: Kneading, Compression, Percussion, and Kneading + Percussion, each of which have Auto, Fast and Slow settings, and a Rolling mode which can be set to full back or partial back.

### ● New Generation Remote Control

The RMS-15 remote features a digital two-digit countdown timer that shows how much time remains on the massage. The timer starts at 15 and runs down in 1 minute increments. Though more slender and ergonomic than others, the RMS-15 remote offers greater functionality and control. The front buttons allow you to modify most of the chair's user-customized modes, while the left side buttons can be used to activate pre-programmed massage sessions.

### ● Control of the Satellite Ottoman / Foot Rest from Chair Remote

Unlike most chairs that are used with separate ottomans, the RMS-15 has an electronic link which allows the ottoman functions to be managed using the chair's remote, eliminating the need for separate remote controls.

### ● Premium Leather

The RMS-15 is upholstered in the finest leather available, soft to the touch but incredibly durable.

Rolling

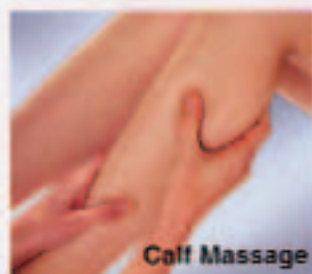

Kneading

Compression

Percussion

Calf Massage

Foot Massage

**Rolling:** Presses firmly on one side of the spine, then the other. It relieves tension and loosens the muscles to prepare the back for a deeper massage.

**Kneading:** Feels like thumbs pressing firmly in a circular motion on both sides of the spine. This therapeutic motion lifts and stretches muscles to improve circulation.

**Compression (HTT® exclusive):** This technique pushes on muscles alongside the spine, and inward toward the spine itself to improve mobility and posture.

**Percussion:** Emulates the feeling of fists tapping on back and shoulder muscles. This is the deep muscle therapy popular in sports medicine to flex spinal joints, relieve pressure, and invigorate the entire back.

**Simultaneous operation:** Three motors are employed to combine kneading, percussion, and rolling techniques that provide an intense massage emulating the popular deep-tissue technique.

**Acupoint:** Most beneficial in the region between the upper back and top of the shoulders, this thumb point mode penetrates to deep muscles.

## functions RMS-15

### Massage Modalities

Rolling:	Full and Partial modes with width control
Kneading:	2 speeds + auto
